

IKEA India Frontend Automation Framework using Playwright

Introduction

This capstone project focuses on developing an End-to-End Frontend Automation Framework for the IKEA India website using Playwright with JavaScript.

Project Objectives

- Build scalable Playwright framework
 - Implement reusable Page Object Model architecture
 - Perform UI, responsive and API validations
 - Generate Allure Reports
 - Implement assertions, screenshots and tracing
-

Website Under Test

<https://www.ikea.com/in/en/>

Technology Stack

- Playwright
 - JavaScript
 - Node.js
 - Allure Reports
 - Git & GitHub
 - VS Code
-

Services Covered

1. Homepage & Navigation Module
 2. Authentication UI Validation Module
 3. Search Functionality Module
 4. Product Listing & Categories Module
 5. Filters & Sorting Module
 6. Product Details Module
 7. Cart / Bag Functionality Module
 8. API & Session Validation Module
 9. Responsive UI Validation Module
-

Framework Features

- Page Object Model (POM)
 - Assertions & Validations
 - Screenshots on Failure
 - Cross Browser Testing
 - Parallel Execution
 - API & Network Validation
 - Session Persistence Testing
 - Allure Reporting
-

Estimated Test Coverage

Module	Estimated Tests
Homepage & Navigation	15
Authentication UI Validation	15
Search Functionality	15
Product Listing & Categories	15
Filters & Sorting	15
Product Details	15
Cart / Bag Functionality	15
API & Session Validation	15
Responsive UI Validation	10
Total	130
